Shoe Print Data Collection Phase 1

1 Introduction

This manual was developed by researchers with the Center for Statistics and Applications in Forensic Evidence. Within it are the procedures that should be followed when collecting data for phase one of the longitudinal shoe impression study. If at any time there is a question on any of these procedures, please make a note using a post-it note and e-mail the principal investigator, the project manager, the faculty in charge of the study, or the author of the specific procedure.
